A: I was searching for the same question and found this. This is a great tool for pilots/space cadets. I highly recommend it. Here's a website where you can download it for free: Here is an article about how to use it: HMS Thirlmere HMS Thirlmere was a British minesweeper, launched as the commercial motor vessel Thirlmere in 1932 by Henry Scarr. She was a minesweeper used during the Second World War, carrying out a minesweeping routine in the Thames Estuary. She was bought by the Royal Navy in 1938, and renamed HMS Thirlmere. The ship was stationed at the Royal Navy Mine flotilla at Beaulieu, Hampshire. She was commissioned in 1940, under the command of Lieutenant-Commander Colin M. D. Ferguson, who had been operating the minesweeper Hermes. She took part in the Dunkirk evacuation and she carried out a minesweeping patrol off the East Coast of England. After the Battle of the River Plate, Thirlmere was attached to the Far East. During the war, she made two voyages to Russia as part of the Allied aid convoy. After the war, Thirlmere was placed in reserve in Southampton. She was broken up at Thos W Ward of Cowes in April 1956. ## What's New In?

Fsx Descent Calculator is a lightweight software application designed to fulfil a single goal: to help pilots calculate the required descending distance and rate based on the variables they input. The information provided by this tool comes in handy in case you are working with a space flight simulator utility, such as Orbiter. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to calculate the descending rate on the breeze, without having to go through installation steps. Simplistic interface Fsx Descent Calculator boasts a clean and easy-to-handle layout that allows you to carry out most operations with minimum effort. You don't need special computer skills to configure the dedicated parameters, so even rookies can master the entire process with minimum effort. Basic functionality The program gives you the possibility to specify the current altitude and desired altitude to descend (in feet), and enter the ground speed in knots. As soon as you enter the necessary data, you only need to hit the "Calculate" button, and the tool provides information about how far out of your destination you should start to descend, as well as the descending rate. Although it doesn't offer support for exporting options, you can copy the results to the clipboard and paste them into other third-party applications. Conclusion All things considered, Fsx Descent Calculator offers a simple yet efficient software solution for helping you calculate the ideal descending distance and rate.
