Easy functionality Help File System Component 1.0 is an advanced, ready and easy to the use ActiveX control for advancer and beginner developers that can add the help file System. Microsoft Corporation developed the.NET framework to provide a unified common environment for software application development. The Framework is

managed, meaning that it is run from the command line on a machine, without the need to write VB.NET, C#, J# or other language. The .NET Framework version 1.1 included a set of essential components, namely the Common Language Runtime (CLR), Managed Extensibility Framework (MEF) and the WPF Framework. The .NET Framework 1.1 has been released to manufacturing and you can get it in the Microsoft Software Distribution Center. BASIC included with the .NET Framework can be considered a new form of BASIC, but it is a high-level language that looks similar to VB.NET. .NET Framework 1.1 is an integrated environment, and includes the following core components: CLR - Common Language Runtime C# and VB.NET - Managed code

Managed Extensibility Framework (MEF) and WPF Framework .NET Framework 1.1 version of the .NET Framework was released on June 8, 2009. .NET Framework 1.1 is an integrated environment and includes the following core components: .NET Framework 1.1 version of the .NET Framework is a part of the .NET Framework 3.5 and will be available as a download from the Microsoft software distribution center. The .NET Framework 1.1 does not affect other .NET Frameworks. The .NET Framework 3.5 version of the .NET Framework will be released to manufacturing in the fourth quarter of 2009. A few months ago, another important release of the. 1d6a3396d6
